DETAILED ACTION

This action responsive to election to restriction requirement filed on February 09, 2006. After further consideration, the arguments are persuasive, the election/restriction made on 01/10/2006 will be withdrawn.

Election/Restrictions

1. Claims 1-12 and 27-36 are directed to an allowable product. Pursuant to the procedures set forth in MPEP § 821.04(B), claims 13-26, directed to the process of making or using an allowable product, previously withdrawn from consideration as a result of a restriction requirement, are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Because all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, the restriction requirement as set forth in the Office action mailed on January 10, 2006 is hereby withdrawn. In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claims including all the limitations of an allowable product claim or rejoined process claim are presented in a continuation or divisional application, such claims may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

2. Claims 1-36 are allowed.

3. The following is an examiner's statement of reasons for allowance: many references in the art disclose system for preventing vehicle turnover on curves and turns comprising wheel stroke sensors, wheel speed sensors, acceleration sensor, steering angle sensor, and vehicle speed sensor for generating wheel condition, vehicle speed, and steering angle signals and a controller for detecting a wheel lift condition and controlling the brake control mechanism to maintain the slip rates of the vehicle less than a predetermined limit to prevent vehicle rollover, such as found in Matsumoto (US 4,976,330). The prior art of record does not teach or suggest, in the claimed combination, a system and method for an automotive vehicle comprising a passive wheel lift detector and a active wheel lift detector, wherein the passive wheel lift detector using normal operating wheel torque and the active wheel lift detector using change of torque and an integrated wheel lift detector generating a final wheel lift signal in response to the passive and active wheel lift signals generated from the passive and the active wheel lift detectors.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
